SUBJECT INDEX TO VOLUME 17

A

Acid comonomers, emulsion copolymerization of vinyl acetate in the presence of, 631–644
Additives, chemical, effect on the stability of kerosene-water dispersions, 675–696
Affinity inversion, surfactant-oil-water systems near, 553–566
Aggregation, in the water-sodium octanoate-butanol system, 263–280
Alamine 336, influence of anionic surfactants on the extraction rate of lactic acid by, 407–431
Alcohols with different structures, effect on the formation of warm oil-in-water microemulsions, 717–734
Alkaline hydrolysis
  for esters, the effect of mixed micelles of surfactants on, 101–110
  of ethyl acetate and ethyl propionate in single and mixed micellar solutions, 339–348
Alkenyl succinic anhydride (ASA) emulsion composition, effect on sizing performance in the paper web, 281–306
Ammonium nitrate, crystallization under organized monolayers of various amphiphiles, 391–405
Anionic surfactants, influence on the extraction rate of lactic acid by Alamine 336, 407–431
Anionic-nonionic surfactant mixtures, emulsions made with, 553–566
Aqueous solubility, of organic compounds, 433–449
Aquifers, surfactant systems for remediation of JP4 jet fuel in, 131–138
ASA. *See* Alkenyl succinic anhydride
Association phenomenon, of esters in water/surfactant/co-surfactant/hydrocarbon system, 71–82

B

Beads
  glass, selective detachment of silica from coattached silica and hematite particles on, 767–791
  immunolatex, strategies to improve the colloidal stability and the reactivity of, 321–337

C

Cassava starch
adsorption on pure goethite, quartz, and kaolinite, 1–12
flocculation of pure goethite, quartz, and kaolinite with, 13–21
Cations, organic and inorganic, surface and electrokinetic properties of clays and other mineral particles untreated and treated with, 527–547
Cetyltrimethylammonium bromide, formation and phase behavior of water-in-diesel oil microemulsion with, 111–130
Chemical warfare agents, polymer-thickened, a study of the organic solvent component in the emulsion system for decontamination of, 307–319
Clays, untreated and treated with organic and inorganic cations, surface and electrokinetic properties of, 527–547
Colloidal stability, improvement for immunolatex beads, 321–337
Copolymerization
emulsion, of vinyl acetate in the presence of acid comonomers, 631–644
of vinyl acetate in non-ionic microemulsions, 701–715
Crystallization, of ammonium nitrate under organized monolayers of various amphiphiles, 391–405
Cyclic voltammetry without probes, effects of ethanol on the diffusion coefficient for SDS micelle, 509–526

D

Demulsification, of water-in-crude oil emulsions, effects of film tension, elasticity, diffusivity, and interfacial activity of demulsifier individual components and their blends on, 33–53
Dye, solubilization in lamellar liquid crystal of system Igepal CO-610 and H_2O, 55–70

E

Emulsion copolymerization, of vinyl acetate in the presence of acid comonomers, 631–644
Emulsion polymerization, of vinyl acetate, interaction between surfactant, monomer, and initiator in, 251–262
Emulsions
ASA, effect of composition on sizing performance in the paper web, 281–306
made with anionic-nonionic surfactant mixtures, 553–566
system, a study of the organic solvent component for decontamination of polymer-thickened chemical warfare agents, 307–319
water-in-crude oil, effects of film tension, elasticity, diffusivity, and interfacial activity of demulsifier individual components and their blends on demulsification of, 33–53

Esters
association phenomenon in water/surfactant/co-surfactant/hydrocarbon system, 71–82
the effect of mixed micelles of surfactants on the alkaline hydrolysis of, 101–110
Ethanol, effect on the diffusion coefficient for SDS micelle, 509–526
Ethyl acetate and ethyl propionate, alkaline hydrolysis in single and mixed micellar solutions, 339–348
Extraction rate, of lactic acid by Alamine 336, influence of anionic surfactants on, 407–431

F

Fine particles, rapid separation from dilute suspensions, 735–765
Flocculation
adsorption of cassava starch on pure goethite, quartz, and kaolinite, 1–12
of pure goethite, quartz, and kaolinite with cassava starch, 13–21
selective, of Agbaja iron ore, 23–32
Foams
effects of characteristics of refining screens on the rheology and persistence of, 645–674
in the petroleum industry (book review), 451
Fragrances, synthetic from pluronic P-85, volatility and solubilization of, 567–576
Free radical crosslinking polymerization, heterogeneous, 139–244

G

Gels, starch, relationship between macroscopic and microscopic viscosities in, 367–377
Glass beads, selective detachment of silica from coattached silica and hematite particles on, 767–791
Goethite, pure
adsorption of cassava starch on, 1–12
flocculation with cassava starch, 13–21

H

Homopolymerization, of vinyl acetate in non-ionic microemulsions, 701–715
Hydrogen bonding, of organic compounds, 433–449
Hydrolysis, alkaline
for esters, the effect of mixed micelles of surfactants on, 101–110
of ethyl acetate and ethyl propionate in single and mixed micellar solutions, 339–348
Hydrotrope, coupling action of, 493–507

I

Igepal CO-610 and H_2O lamellar liquid crystal system, solubilization of dye in, 55–70
Immunolatex beads, strategies to improve the colloidal stability and the reactivity of, 321–337

Interfacial forces, in aqueous media (book review), 247
Interfacial tension, of organic compounds, 433–449
Internet, a guide for chemists (book review), 549–550
Iron ore, Agbaja, selective flocculation of, 23–32

J

Jet fuel, JP4, surfactant systems for remediation in soil and aquifers, 131–138

K

Kaolinite, pure
  adsorption of cassava starch on, 1–12
  flocculation with cassava starch, 13–21
Kerosene-water dispersions, effect of chemical additives on the stability of, 675–696

L

Lactic acid, influence of anionic surfactants on the extraction rate by Alamine 336, 407–431
Latexes, polyvinyl acetate, concurrent interactions between monomer–emulsifier and monomer–polymer in, 577–589
Liquid crystal
  lamellar
    structure transition to biocontinuous microemulsion, 493–507
  of system Igepal CO-610 and H_2O, solubilization of dye in, 55–70
  lyotropic, phase stability of systems of, 591–606

M

Methoxydimethyloctylsilane, phase equilibria in organic solvents, 607–629
Micellar solutions, single and mixed, the alkaline hydrolysis of ethyl acetate and ethyl propionate in, 339–348
Micelles
  mixed, of surfactants, effect on the alkaline hydrolysis of esters, 101–110
  SDS with different shape, diffusion coefficient of and the effects of ethanol by cyclic voltammetry without probes, 509–526
Microemulsions
  biocontinuous, structure transition from lamellar liquid crystal to, 493–507
  non-ionic, homopolymerization and copolymerization of vinyl acetate in, 701–715
  sun screen, 459–475
  warm oil-in-water, the effect of alcohols with different structures on the formation of, 717–734
  of water-in-diesel oil with sodium oleate and cetyltrimethylammonium bromide, formation and phase behavior of, 111–130

Mineral particles, untreated and treated with organic and inorganic cations, surface and electrokinetic properties of, 527–547
Monomer–emulsifier and monomer–polymer, concurrent interactions in polyvinyl acetate latexes, 577–589

N

Non-ionic microemulsions, homopolymerization and copolymerization of vinyl acetate in, 701–715
Nonionic surfactants
hydrogenated oligo(isoprene)carboxylic acid N-alkanolamides as, 455–458
phase behavior and interfacial properties of systems with salicylate components, 477–491
Nonylphenol poly(ethylene carbonate) surfactants, derived from nonylphenol, ethylene oxide, and water, 353–366

O

Oil-in-water microemulsions, warm, the effect of alcohols with different structures on the formation of, 717–734
Oligo(isoprene)carboxylic acid N-alkanolamides, hydrogenated, as a new group of nonionic surfactants, 455–458
Organic compounds, hydrogen bonding, interfacial tension, and the aqueous solubility of, 433–449
Organic solvents
in the emulsion system for decontamination of polymer-thickened chemical warfare agents, 307–319
phase equilibria of methoxydimethyloctylsilane, tetramethyldioctyldisiloxane in, 607–629
phase equilibria with tetramethyldioctyldisiloxane and water, 793–806

P

Paper web, the effect of emulsion composition of ASA on sizing performance in, 281–306
Particle concentration, effect on the physical properties of titanium dioxide suspensions, 83–96, 245
Particles, fine, rapid separation from dilute suspensions, 735–765
Personal care products, consumer testing and evaluation of (book review), 550
Pharmaceutical solids, physical characterization of (book review), 697
Phase stability, of lyotropic liquid crystal systems, 591–606
Pluronic P-85, volatility and solubilization of synthetic fragrances by, 567–576

Polymerization
emulsion, of vinyl acetate, interaction between surfactant, monomer, and initiator in, 251–262
heterogeneous free radical crosslinking, kinetics of, 139–244
Polymers at interfaces (book review), 697–698
Polymer-thickened chemical warfare agents, the organic solvent component in the emulsion system for decontamination of, 307–319
Polyvinyl acetate latexes, concurrent interactions between monomer–emulsifier and monomer–polymer in, 577–589

Q

Quartz, pure
adsorption of cassava starch on, 1–12
flocculation with cassava starch, 13–21

R

Raman scattering studies, of surfactant association, 379–389
Reactivity, improvement for immunolatex beads, 321–337
Refining screens characteristics, effects on the rheology and persistence of foams, 645–674

S

Salicylate components, phase behavior and interfacial properties of systems of nonionic surfactants with, 477–491
Silica, selective detachment from coattached silica and hematite particles on glass beads, 767–791
Sizing performance in the paper web, the effect of emulsion composition of ASA on, 281–306
Sodium dodecyl sulfate (SDS) micelle, with different shape, diffusion coefficient and the effects of ethanol by cyclic voltammetry without probes, 509–526
Sodium oleate, formation and phase behavior of water-in-diesel oil microemulsion with, 111–130
Soil, surfactant systems for remediation of JP4 jet fuel in, 131–138
Solubilization
of dye in lamellar liquid crystal of system Igepal CO-610 and H_2O, 55–70
in surfactant aggregates (book review), 349
Solvents, organic
in the emulsion system for decontamination of polymer-thickened chemical warfare agents, 307–319
phase equilibria of methoxydimethyloctylsilane, tetramethyldioctyldisiloxane in, 607–629
phase equilibria of tetramethyldioctyldisiloxane and water, 793–806
Stability, of kerosene-water dispersions, effect of chemical additives on, 675–696
Starch gels, relationship between macroscopic and microscopic viscosities in, 367–377

Sun screen microemulsions, 459–475
Surfactant-oil-water systems near the affinity inversion, 553–566
Surfactants
in agrochemicals (book review), 97
anionic, influence on the extraction rate of lactic acid by Alamine 336, 407–431
association, Raman scattering studies of, 379–389
derived from nonylphenol, ethylene oxide, and carbon dioxide, 353–356
the effect of mixed micelles on the alkaline hydrolysis of esters, 101–110
nonionic
hydrogenated oligo(isoprene)carboxylic acid N-alkanolamides as, 455–458
systems with salicylate components, phase behavior and interfacial properties of, 477–491
solutions, structure and flow in (book review), 550
systems, for soil and aquifer remediation of JP4 jet fuel, 131–138
Suspensions
dilute, rapid separation of fine particles from, 735–765
titanium dioxide, effect of particle concentration on the physical properties of, 83–96, 245

T

Tetramethyldioctyldisiloxane
phase equilibria in organic solvents, 607–629
and water and organic solvents, phase equilibria of, 793–806
Titanium dioxide suspensions, effect of particle concentration on physical properties, 83–96, 245

V

Vinyl acetate
emulsion copolymerization in the presence of acid comonomers, 631–644
homopolymerization and copolymerization in non-ionic microemulsions, 701–715
interaction between surfactant, monomer, and initiator in emulsion polymerization of, 251–262
Viscosities, macroscopic and microscopic, relationship in starch gels, 367–377

W

Water-in-crude oil emulsions, effects of film tension, elasticity, diffusivity, and interfacial activity of demulsifier individual components and their blends on demulsification of, 33–53
Water-in-diesel oil microemulsion, with sodium oleate and cetyltrimethylammonium bromide, formation and phase behavior of, 111–130
Water-sodium octanoate-butanol system aggregation studies, 263–280
Water/surfactant/co-surfactant/hydrocarbon system, association phenomenon of esters in, 71–82
